

This comprehensive guide provides a strategic overview of the security training ecosystem offered by **BJSL Training Ltd.** In the high-stakes environment of 2026—where AI-orchestrated phishing and machine-identity theft are the new norms—BJSL's curriculum is designed to evolve a business from a state of "vulnerable" to "resilient."

We will explore these offerings through a **5-Tier Maturity Model**, followed by a customized training schedule and budget breakdown for your organization.

---

## Part 1: The BJSL Security Training Ecosystem

BJSL's training is categorized into three primary pillars: **Foundational Awareness**, **Technical Execution**, and **Strategic Governance**. Their methodology moves beyond static video modules, utilizing live, instructor-led sessions that prioritize context and real-world application.

### Tier 1: The Foundation – Workforce Awareness

The most significant vulnerability in any IT landscape remains the human element. BJSL's **Introduction to Cyber Security** is the essential first stepping stone.

- **Course Details:** A 1- to 2-day immersive program (Condensed vs. Full Foundation).
- **Focus:** Social Engineering (deepfakes, voice cloning), secure authentication (MFA/Passwordless), and safe hybrid working.
- **Business Role:** It transforms passive employees into a "Human Firewall."
- **Cost:** ~£695 per person (Full) or £495 (Condensed for 10+ delegates).

### Tier 2: The Infrastructure – Core Technical Security

For your IT administrators and junior security staff, the **CompTIA Security+** course acts as the definitive technical foundation. It ensures the people managing your servers, networks, and endpoints speak the language of security.

- **Key Domains:** Threat analysis, architecture and design, and implementation of secure identity protocols.
- **The Stepping Stone:** This transitions your IT department from "general support" to "security-aware operators." It provides the baseline technical skills needed to manage the tools you've already invested in (Firewalls, EDR, SIEM).
- **Cost:** ~£2,995 per person.

### Tier 3: The Perimeter – Cloud and Hybrid Specialization

With the shift toward serverless architectures and SaaS in 2026, the traditional network perimeter has dissolved. BJSL offers the **(ISC)<sup>2</sup> Certified Cloud Security Professional (CCSP)**.

- **Focus:** Cloud data sovereignty, shared responsibility models, and securing virtualized infrastructure.

- **The Stepping Stone:** This is critical for businesses migrating legacy systems to AWS, Azure, or Google Cloud. It ensures that cloud misconfigurations—the #1 cause of cloud data breaches—are avoided.
- **Cost:** ~£2,995 per person.

#### Tier 4: The Proactive Edge – Offensive Defence

To defend a landscape, your specialists must understand the attacker's toolkit. BJSL offers the **Certified Ethical Hacker (CEH) v13 (AI-Integrated)** and **CompTIA PenTest+**.

- **CEH v13 Innovation:** This specific version focuses on how hackers use AI to bypass traditional defence's.
- **The Stepping Stone:** Training your own staff in ethical hacking allows for continuous, internal vulnerability scanning. Instead of waiting for a quarterly external audit, your team can find and patch holes in real-time.
- **Cost:** ~£3,995 per person.

#### Tier 5: The Pinnacle – Leadership and Governance

At the highest level, security must be aligned with business goals and risk appetite. BJSL provides the "Gold Standard" certifications: **CISSP** and **CISM**.

- **CISSP (The Architect):** Deep technical and engineering governance.
- **CISM (The Manager):** Focuses on incident response management and ROI-driven security programs.
- **The Stepping Stone:** These courses prepare your senior staff for C-suite roles (CISO). They ensure that every pound spent on security training and software is justified by a reduction in business risk.
- **Cost:** CISSP (~£4,195) | CISM (~£3,795).

### Part 2: The "Stepping Stone" Implementation Strategy

Businesses often make the mistake of buying high-end tools before their people know how to use them. BJSL's courses should be deployed in a specific sequence to maximize the **Cyber Maturity ROI**.

Step	Business Phase	Training Goal	Resulting Capability
1	Stabilization	Train all staff (Intro to Cyber)	70% reduction in phishing success rates.
2	Hardening	Train IT Dept (Security+)	Standardized secure configurations across the fleet.

Step	Business Phase	Training Goal	Resulting Capability
3	Modernization	Train Cloud Leads (CCSP)	Zero-trust architecture implementation in the cloud.
4	Validation	Train Sec-Ops (CEH v13)	Internal "Red Teaming" to find weaknesses early.
5	Governance	Train Leadership (CISSP/CISM)	Cyber security becomes a board-level strategic asset.

### Part 3: Customized Training Schedule & Budget Breakdown

*Assumption: A mid-sized business with a 20-person cohort to be trained over 6 months.*

#### Proposed 6-Month Training Schedule

Month	Group	Training Course	Format
Month 1	All Staff (15)	Intro to Cyber Security	2x Live 1-day sessions
Month 2	IT Team (3)	CompTIA Security+	5-day Intensive (Live Online)
Month 3	Cloud Lead (1)	CCSP	5-day Specialization
Month 4	Sec-Ops Lead (1)	CEH v13 (AI-Integrated)	5-day Offensive Training
Month 5	IT Manager (1)	CISM or CISSP	5-day Strategic Leadership
Month 6	All Staff	Simulated Phishing Test	Post-training assessment

#### Estimated Budget Breakdown (FY 2026)

Course	Delegates	Unit Cost	Total
Intro to Cyber Security (Condensed)	15	£495	<b>£7,425</b>
CompTIA Security+	3	£2,995	<b>£8,985</b>
CCSP (Cloud Security)	1	£2,995	<b>£2,995</b>
CEH v13 (Ethical Hacking)	1	£3,995	<b>£3,995</b>
CISM (Management)	1	£3,795	<b>£3,795</b>
<b>TOTAL INVESTMENT</b>			<b>£27,195</b>

**Note:** BJSI often provides "Corporate Bundles" or "Delegate Packs" that can reduce the total cost by 10-15% when booking multiple tiers together.

## Why BJSJ for Your Business?

The value of BJSJ lies in their **post-training support**. Unlike "one-and-done" portals, BJSJ provides:

1. **Direct E-Access to Instructors:** Your team can ask questions about your specific environment during the course.
2. **Exam Readiness:** Their 90%+ pass rates are achieved through simulated testing environments included in the price.
3. **Future-Proofing:** By including AI-specific modules in the CEH v13, they ensure your team isn't training for the threats of 2020, but the threats of today.
